28946 U. S. D. A. Economic Research Service. FARM REAL ESTATE TAXES; RECENT TRENDS AND DEVELOPMENTS. U. S. D. A. Econ. Res. Serv. RET-8,14 p., map. Dec. 1968. 1.9 Ec7Farm  
Taxes levied on farm real estate in 1967 totaled more than \$1,940 million, up 8.4 percent from 1966. This was the 25th consecutive annual increase and the \$151 million jump was record high. Three States, California, Illinois, and Iowa, accounted for nearly one-third of the 1967 levy.

Most taxes on farm real estate are imposed by local units of government. In 1967, the U.S. average was \$1.89 per acre, compared with \$1.74 a year earlier. Market value of privately owned farm real estate rose somewhat slower than taxes; thus, the effective rate of tax increased from \$1.02 per \$100 of full value in 1966 to \$1.05 in 1967. This marked the first significant change in this figure in the last 7 years.

THERMAL INSULATION FROM WOOD FOR  
BUILDINGS; EFFECTS OF MOISTURE AND ITS CON-  
TROL. U. S. Forest Serv. Res. Paper FPL-86, 43 p.  
Ref. July 1968. A99.9 F7634U

Thermal insulation is an important component  
of modern homes and other buildings. It provides for the  
comfort required for livability and, when properly de-  
signed for and installed, pays for itself in fuel savings  
during winter heating and power savings during summer  
cooling.

Various kinds of thermal insulation made from  
wood are described. Considerations required for proper  
design are discussed. Design values for wood and wood-  
base materials are presented. Methods are presented for  
estimating heat flow, fuel savings, and temperatures on  
surfaces and within typical constructions. The effects of  
moisture as influenced by insulation and cold weather are  
discussed. Proper vapor barrier practice for good re-  
sults are presented.

FINITE ELEMENT TECHNIQUES FOR ORTHO-  
TROPIC PLANE STRESS AND ORTHOTROPIC PLATE  
ANALYSIS. U. S. Forest Serv. Res. Paper FPL-87, 39 p.  
June 1968. A99.9 F7634U

This paper develops finite element techniques  
for applicability to plane stress problems and plate prob-  
lems involving orthotropic materials such as wood and  
plywood. Applications to limited examples show that the  
methods have merit especially if means of handling very  
large systems of equations are utilized.

29025 Smith, D. M.  
WOOD QUALITY OF LOBLOLLY PINE AFTER  
THINNING. U. S. Forest Serv. Res. Paper FPL-89, 11 p.  
May 1968. A99.9 F7634U

This study provides a comparison of loblolly  
pine wood produced 4 years after heavy thinning and  
pruning of 9-year-old stands with wood of unthinned  
stands of the same age.

A three-fold increase in radial growth was  
found to be accompanied by a significant increase in  
specific gravity and percentage of latewood in response  
to heavy thinning and pruning. A change in the relation-  
ship between specific gravity and percentage of latewood  
suggested that there were fundamental changes in the  
wood structure associated with thinning and pruning.

SOME NONDESTRUCTIVE PARAMETERS FOR  
PREDICTION OF STRENGTH OF STRUCTURAL LUM-  
BER. U. S. Forest Serv. Res. Paper FPL-100, 6 p. Oct.  
1968. A99.9 F7634U

In general, strength ratio is a good predictor of  
strength of structural lumber; however, when lumber has  
no defects (100 percent strength ratio) this estimator can-  
not be effective. In such cases, some characteristics of  
clear wood, such as modulus of rupture of small clear  
specimens, modulus of elasticity, and specific gravity,  
make reasonable predictors of strength. Because all di-  
mension lumber is intermediate in quality (0-100 percent  
strength ratio), it follows that a combination of strength  
ratio and modulus of elasticity, strength ratio and modu-  
lus of rupture of small clear specimens, or strength ratio  
and specific gravity, provides an improved model.

This study suggests grading variables and func-  
tions that are capable of better strength predictions than  
strength ratio or modulus of elasticity alone. It provides  
well supported bases for improving stress grading of  
lumber.

STRENGTH EVALUATION OF ROUND TIMBER  
PILES. U. S. Forest Serv. Res. Paper FPL-101, 44 p.  
Ref. Dec. 1968. A99.9 F7634U

Strength properties in compression parallel to  
grain and bending were determined for Douglas-fir,  
southern pine, and red oak timber piles. The effect of  
kiln drying of southern pine piles on crushing strength  
was investigated. The results should be useful in develop-  
ing timber pile specifications.

NETVSL: A COMPUTER PROGRAM FOR CALCULATION OF TREE VOLUMES WITH INTERIOR DEFECT. U. S. Forest Serv. Res. Paper INT-51,30 p. 1968. A99.9 F764U

This comprehensive computer program, written in FORTRAN IV language, calculates gross and net volume, surface area, and length from stem measurements. Tree input data include measurements of lengths, diameters, and cull dimensions obtained from felled trees; gross volumes of standing trees may be computed from Barr and Stroud optical dendrometer measurements. Volume units include cubic feet, Scribner and International 1/4" log scale. Various merchantability standards can be applied simultaneously to identical input data to obtain correspondingly various volume data output. This paper includes typical instructions for collecting and compiling tree data.

WALNUT [JUGLANS] WOOD CHARACTERISTICS IN RELATION TO SOIL-SITE CONDITIONS. U. S. Forest Serv. Res. Paper NC-23:37-40. Ref. 1968. aSD11.A34

This is a report, before completion, of a program that the Forest Products Laboratory has embarked on. It is a concentrated program to find, if possible, one or more intrinsic wood quality criteria for black walnut and hopefully for other hardwood species as well. The program attempts to cover all of the main quality attributes desired by hardwood users. Further, it covers the possibility of finding relationships of these quality criteria to soil-site conditions.

The quality attribute most evident in the hardwoods is aesthetics, or color variation; this is being quantitatively evaluated with a spectrophotometer. Wood texture is being evaluated by anatomical characteristics; and shrinkage, specific gravity, machinability, and strength are being evaluated directly.

- Lamb, F. M., and Murphey, W. K.  
29045 THE GROWTH AND ANATOMICAL FEATURES OF NUTRIENT-DEFICIENT SEEDLINGS. U. S. Forest Serv. Res. Paper NC-23:48-51. Ref. 1968. aSD11.A34

Acacia saccharinum.  
The results of this study indicate that nutrient deficiencies in forest trees may cause disruptions of certain physiological processes which, in turn, may result in reduction of growth and alteration of anatomical features.

Much work remains before the complete effects of nutrient deficiencies on growth and anatomy of forest trees are fully understood. The interaction between nutrient elements is highly complex. Therefore, it is difficult to assign one particular anatomical or growth alteration to a deficiency of a single element. This information is vital, however, if the full potential of our tree improvement programs are to be realized outside the laboratory.

SNOOP: A COMPUTER PROGRAM FOR 2- AND 3-DIMENSIONAL PLOTTING. U. S. Forest Serv. Res. Paper NE-91,24 p. 1968. A99.9 F7622U

Forest mensuration.  
A computer program called SNOOP, described in detail, allows visual examination of the interaction effects of independent variables by way of three-dimensional plotting. Two-dimensional plotting is also available. The program is written in FORTRAN IV and should run with little or no modification on computers that accept FORTRAN IV, have a 32K core, and have three tape drives or equivalent input/output devices.

- 29048 Safford, L. O.  
TEN-YEAR AVERAGE GROWTH RATES IN THE SPRUCE-FIR REGION OF NORTHERN NEW ENGLAND. U. S. Forest Serv. Res. Paper NE-93,20 p.,map. 1968. A99.9 F7622U

Reports results of a cooperative growth study on 766 plots in natural extensively managed stands. Plots were distributed among 27 stand-condition classes including three levels of stand composition, height, and density. The overall average annual net growth rate was estimated as 41.9 cubic feet per acre with a 2.1 percent sampling error. Stand composition had the strongest influence on forest net growth, which increased as the percent of softwood species increased. Spruce and fir made major contributions to net growth in all stand types.

29049 Yawney, H. W., and Trimble, G. R.  
OAK [QUERCUS] SOIL-SITE RELATIONSHIPS,  
IN THE RIDGE AND VALLEY REGION OF WEST VIRGINIA  
AND MARYLAND. U. S. Forest Serv. Res. Paper  
NE-96, 19 p., map. Ref. 1968. A99.9 F7622Un

An oak soil-site study showed that heights of the five oak species studied (red, scarlet, black, chestnut, and white oak) could be predicted from measurements of five factors: stand age, aspect, slope position, thickness of the A + B horizons, and pH of the A<sub>2</sub> horizon. Compared to a previous study made in the Mountain Region to the west where rainfall was much greater, site index in the Ridge and Valley Region was appreciably lower for comparable soil and topographic locations.

GROWTH OF APPALACHIAN HARDWOODS AS  
AFFECTED BY SITE AND RESIDUAL STAND DENSITY.  
U. S. Forest Serv. Res. Paper NE-98, 13 p. 1968.  
A99.9 F7622Un

In a 10-year growth study, Appalachian hardwoods were cut to different residual basal areas on an excellent site (index 85 for oak) and a fair site (index 63 for oak). There were large differences in growth between the two sites, the excellent site producing 1.4 times more cubic volume and 2.1 times more board-foot volume than the fair site. Apparently the lower density on the excellent site reduced stocking of larger trees to a point below full occupancy of the site. However, growth rates of the individual residual trees were greatest at the lowest density, regardless of size.

29051 Wendel, G. W., and Trimble, G. R.  
EARLY REPRODUCTION AFTER SEED-TREE  
HARVEST CUTTINGS IN APPALACHIAN HARDWOODS.  
U. S. Forest Serv. Res. Paper NE-99, 16 p. 1968.  
A99.9 F7622Un

Three years after seed-tree cuttings in Appalachian hardwood stands, and immediately after the removal of the seed trees, small reproduction (stems 1 foot tall to 1 inch d.b.h.) of desirable species was abundant and well-distributed, and was composed of a large proportion of seedling-origin stems. Both species composition of the reproduction and relative abundance of the different species varied greatly with site quality.

PLANTING PAPER BIRCH [BETULA Papyrifera]  
IN OLD FIELDS IN MAINE. U. S. Forest Serv. Res.  
Paper NE-103, 12 p. 1968. A99.9 F7622Un

In a study of different methods of sod removal, a series of seven plantations was established in western Maine. After five growing seasons, survival and height growth were better where the sod was removed than where the seedlings were planted directly in the sod. Meadow mice caused much mortality and damage. Deer browsed many of the seedlings. The results, altogether not entirely satisfactory, suggest that paper birch plantations could be successfully established on suitable old-field sites.

29056 Grisez, T. J.  
GROWTH & DEVELOPMENT OF OLDER  
PLANTATIONS IN NORTHWESTERN PENNSYLVANIA.  
U. S. Forest Serv. Res. Paper NE-104, 40 p. 1968.  
A99.9 F7622Un

#### Bibliography, p. 39-40.

Plantations examined in 1939 were re-examined in 1960-61, and sample plots were laid out to obtain data on yield. Red pine and the larches still rated best, but pitch pine and jack pine could no longer be recommended. White pine looked better than it did in 1939, and Norway spruce was still growing well. However, Scotch pine could be recommended only in certain situations. The author concludes that mixed plantations merit favorable consideration.

29057 LaPage, W. F.  
THE ROLE OF CUSTOMER SATISFACTION IN  
MANAGING COMMERCIAL CAMPGROUNDS. U. S. Forest  
Serv. Res. Paper NE-105, 23 p. 1968.  
A99.9 F7622Un

The key to a successful private campground is satisfied customers. A series of studies at New Hampshire's state parks and commercial campgrounds suggests several ways in which the campground manager can increase camper satisfaction and thus promote longer and more frequent visits.

29058 Blum, B. M., and Koelling, M. R.  
EFFECT OF VACUUM PUMPING ON LATERAL  
MOVEMENT OF SAP IN THE MAPLE TREE BOLE.  
U. S. Forest Serv. Res. Paper NE-107, 8 p. 1968.  
A99.9 F7622Un

A study of possible experimental bias due to lateral sap movement between paired tapholes when one was vacuum-pumped. No movement of dyed sap nor diminishing of positive natural sap pressure was observed between tapholes paired 6 inches apart on the tree bole, suggesting that lateral movement of sap between tapholes did not occur.

29059 Blum, B. M., and Gibbs, C. B.  
VARIATION OF SUGAR MAPLE SAP YIELD  
AND ITS INFLUENCE ON EXPERIMENTAL DESIGN.  
U. S. Forest Serv. Res. Paper NE-108, 8 p. 1968.  
A99.9 F7622Un

The large amount of variation in sap yield from sugar maple trees precludes efficient use of simple random-sampling designs. Grouping of trees into blocks of pairs on the basis of previous sap yield will reduce the number of samples needed for tests of treatment effects. Pairing or grouping of tapholes on the same tree is also a satisfactory procedure for studies involving taphole treatments.

DO SMALL MAMMALS AND BIRDS AFFECT  
REPRODUCTION OF SPRUCE AND FIR? U. S. Forest  
Serv. Res. Paper NE-110, 3 p. 1968. A99.9 F7622Un

Many spruce-fir stands in the Northeast reproduce to fir rather than spruce; small mammal preference for spruce seed have been suggested as one reason for this. A study of spruce-fir reproduction, using various combinations of protection from small mammals and ground-feeding birds, showed on evidence of preferential feeding. Enclosures used in this study may have had an unnatural effect on feeding habits, so further studies are needed to determine the true importance of preferential feeding under natural conditions.

FOR WOODEN PALLETS; 1965. U. S. Forest Serv. Res.  
Paper NE-117, 40 p., map. Ref. 1968. A99.9 F7622Un
- Since the early stages of World War II, the  
Department of Defense (DOD) has constituted a large mar-  
ket for many different kinds of wooden pallets. Because  
requirements for palletized shipments to Southeast Asia  
increased substantially in 1965, DOD sometimes found it  
difficult to obtain the kinds and quantities of pallets de-  
sired within a specified time period. This study describes  
the kinds and quantities of pallets needed, when and where  
the pallets are needed, how the pallets are purchased,  
sources of pallet supply, pallet prices, and problems as-  
sociated with selling to DOD.

NUTRIENT CYCLING BY THROUGHFALL AND  
STEMFLOW PRECIPITATION IN THREE COASTAL  
OREGON FOREST TYPES. U. S. Forest Serv. Res.  
Paper PNW-54, 7 p. Ref. 1968. A99.9 F7625Uni
- K. C. Lu, W. B. Bollen, and C. S. Chen, joint  
authors.
- Throughfall and stemflow were collected be-  
neath three adjacent forest types—red alder; conifer-  
Douglas-fir, western hemlock, and Sitka spruce; and a  
mixture of alder and conifer. Weight of N and dissolved  
solids in stemflow was insignificant because of small  
amounts of stemflow and soil area affected. Nutrient cycl-  
ing rates differ appreciably between the three forest  
types.

SEASONAL HEIGHT GROWTH OF UPPER-  
SLOPE CONIFERS. U. S. Forest Serv. Res. Paper  
PNW-62, 7 p. Ref. 1968. A99.9 F7625Uni
- Time of bud burst and seasonal distribution of  
height growth were studied for 2 consecutive years on  
eight coniferous species growing in association on two  
upper-slope areas in the Oregon Cascades. At each area,  
significant variations between species and years general-  
ly were found for initiation of bud bursting, length of  
growing season, and 50-, 90-, and 100-percent completion  
of growth. Total height growth seemed to be related to  
length of current growing season, particularly for the  
true firs and mountain hemlock.

INVESTIGATIONS OF SHINGLE TOW PACKING  
MATERIAL FOR CONIFER SEEDLINGS. U. S. Forest  
Serv. Res. Paper PNW-63, 10 p. Ref. 1968.  
A99.9 F7625Uni
- Thuja plicata.
- Western redcedar shingle tow is used exten-  
sively in forest nurseries to keep seedling roots moist  
during storage and shipment. Chemical compounds found  
in cedar wood, particularly thujaplicins, can depress root  
respiration or kill seedlings. Concentrations up to 120  
p.p.m. thujaplicins have been found in nursery samples of  
tow. Soil on seedling roots can adsorb thujaplicins and  
moderate their influence. A number of factors affect  
availability and uptake and determine whether the net ef-  
fect of shingle tow use will be detrimental or not.

- 29076 PRUNING OF PONDEROSA PINE; EFFECT ON  
GROWTH. U. S. Forest Serv. Res. Paper PNW-68, 9 p.  
Ref. 1968. A99.9 F7625Uni
- The ratio of existing crown length to total  
height has an important bearing on the proportion of  
crown length that should be pruned from ponderosa pine.  
Therefore, there is a variable limit to proportion of  
crown length that can be removed and still maintain ac-  
ceptable growth rates. A table is presented that shows  
diameter growth reduction that can be expected from re-  
moving different proportions of live crown length.

29077 Teeguarden, D. E.  
ECONOMICS OF REPLACING YOUNG-GROWTH PONDEROSA PINE [PINUS PONDEROSA] STANDS; A CASE STUDY. U. S. Forest Serv. Res. Paper PSW-47, 16 p. 1968. A99.9 F7652P  
Compares the expected capital value growth of five ponderosa pine stands (70 to 80 years old) on the Challenge Experimental Forest, Yuba County, Calif., with the cost of delaying harvest (defined as sum of stock-holding and land-holding costs). Suggests that replacement of all five stands would be financially desirable under constant stumpage prices. Recommends replacing three stands and holding two—at least until the end of the planning period—assuming that prices will increase 25 percent.

29078 Hawksworth, F. G., Stewart, J. L., and Bailey, W. F.  
YOU CAN SAVE YOUR PINES FROM DWARF MISTLETOE. U. S. Forest Serv. Res. Paper RM-35, 21 p. 1968. A99.9 F7632U

29079 Heidmann, L. J.  
SILVICULTURAL CONTROL OF DWARF MISTLETOE [ARCEUTHOBium VAGINATUM CRYPTOPODUM] IN HEAVILY INFECTED STANDS OF PONDEROSA PINE [PINUS PONDEROSA] IN THE SOUTHWEST. U. S. Forest Serv. Res. Paper RM-36, 11 p. 1968. A99.9 F7632U

Three treatments—limited control by harvest cutting and stand improvement, complete control, and light improvement selection—were tested. Limited control appeared impractical. Silvicultural control of heavy infections required almost complete stand destruction. Because severely opened stands were highly susceptible to windthrow, clearcutting seems indicated.

29080 Lightle, P. C., and Andrews, S. R.  
RED ROT IN RESIDUAL PONDEROSA PINE [PINUS PONDEROSA] STANDS ON THE NAVAJO INDIAN RESERVATION. U. S. Forest Serv. Res. Paper RM-37, 12 p., map. 1968. A99.9 F7632U

Losses from *Polyporus anecephalus*.  
Data from plots located in the Reservation revealed that red rot cull amounted to 15 percent of the gross volume of the virgin stand. Of several factors studied, tree age was most significant. Bark color in the lower trunk was a better criterion of red rot cull than broad age classes based on actual or estimated ages. The current system of marking removed 48 percent of the gross volume and 68 percent of the red rot volume. Alternate methods of marking are discussed.

29081 Van Deusen, J. L.  
PERIODIC GROWTH OF POLE-SIZED PONDEROSA PINE [PINUS PONDEROSA] AS RELATED TO THINNING AND SELECTED ENVIRONMENTAL FACTORS. U. S. Forest Serv. Res. Paper RM-38, 12 p. Ref. 1968. A99.9 F7632U

Diameter growth began earlier in thinned stands and proceeded more rapidly than in unthinned stands. The length of the height growth season averaged about the same for trees in the two stands, but the thinned trees grew a little faster. Beginning or ending of tree growth could not be consistently related to air temperature of calculated degree days. There was, however, a distinct relationship between precipitation and diameter fluctuations for trees growing under a moisture stress.

29082 Stelzer, M. J.  
THE GREAT BASIN TENT CATERPILLAR IN NEW MEXICO: LIFE HISTORY, PARASITES, DISEASE, AND DEFOLIATION. U. S. Forest Serv. Res. Paper RM-39, 16 p. Ref. 1968. A99.9 F7632U

*Malacosoma fragile* (Stretch) is epidemic periodically in quaking aspen stands of northern New Mexico. Heavy defoliation for 3 consecutive years decreased annual ring width 75 percent; percentage of dead trees increased from 20 to 70, and almost all survivors had dead tops and branches. Larvae begin to hatch in late May, and feed for 30-42 days (five instars). Eggs are laid from mid-July to early August in masses of up to 250. First-instar larvae pass the winter within the egg chorion. Two species of predators and 49 parasites have been identified in New Mexico and Arizona.

29084 SIMULATING THE MANAGEMENT OF EVEN-AGED TIMBER STANDS. U. S. Forest Serv. Res. Paper RM-42, 32 p. 1968. A99.9 F7632U

Presents a computer program, written in Fortran IV, for simulation of the management of even-aged timber stands. Changes computed include tree growth, harvest cuts, periodic thinning, and catastrophic losses. Annual costs and returns are summarized in various statements of money value.

Myers, C. A., and Godsey, G. L.  
29085 RAPID COMPUTATION OF YIELD TABLES FOR MANAGED, EVEN-AGED TIMBER STANDS. U. S. Forest Serv. Res. Paper RM-43, 16 p. 1968. A99.9 F7632U

Sets of yield tables that show probable results of various management alternatives can be valuable tools for decision making, especially when they can be made available quickly and at relatively low cost. Such tables can be obtained with data from temporary plots and the computer programs presented.

James, G. A., and Henley, R. K.  
29086 SAMPLING PROCEDURES FOR ESTIMATING MASS AND DISPERSED TYPES OF RECREATION USE ON LARGE AREAS. U. S. Forest Serv. Res. Paper SE-31, 15 p., map. Mar. 1968. A99.9 F7623U

A pilot test was successfully employed during summer 1966 to estimate mass and dispersed types of recreation use on the Pacific District, Eldorado National Forest in California. Use was sampled using a stratified random-sampling technique which incorporated road checkpoints at which existing recreationists were interviewed to obtain information concerning length of stay and recreational activities pursued. The Pacific District received almost 195,000 visitor-days of recreation use during the 101-day sampling period.

Hough, W. A.  
29087 FUEL CONSUMPTION AND FIRE BEHAVIOR OF HAZARD REDUCTION BURNS. U. S. Forest Serv. Res. Paper SE-36, 7 p. June 1968. A99.9 F7623U

Fuel consumption and fire behavior of hazard reduction burns in slash-longleaf pine stands unburned for at least 10 years were evaluated under various environmental conditions during three winter seasons. Rate of spread of backfires was found to be inversely related to moisture content of the fresh litter layer and to relative humidity. Moisture content of the fresh litter was influenced by relative humidity and days since measurable rain and could be predicted from their values. Reduction of litter fuel and release of available fuel energy were found to be predictable from moisture content and dry weight values of the total litter layer.

Schroeder, J. G., Campbell, R. A., and Rodenbach, R. C.  
29088 SOUTHERN PINE LOG GRADES FOR YARD AND STRUCTURAL LUMBER. U. S. Forest Serv. Res. Paper SE-39, 9 p., map. Sept. 1968. A99.9 F7623U

This paper presents the Forest Service standard log grades for southern pine. They were developed from analysis of tree grade data and replace the previously used knot-count grades. The log grades are applicable to loblolly, shortleaf, pond, longleaf, and slash pine logs that will be sawed into standard yard and structural lumber.

Schroeder, J. G., Campbell, R. A., and Rodenbach, R. C.  
29089 SOUTHERN PINE TREE GRADES FOR YARD AND STRUCTURAL LUMBER. U. S. Forest Serv. Res. Paper SE-40, 15 p. Sept. 1968. A99.9 F7623U

This paper presents the Forest Service standard tree grades for southern pine, developed on the basis of lumber recovery studies conducted throughout the South. The grades are applicable to loblolly, shortleaf, pond, longleaf, and slash pine trees that will be sawed into standard yard and structural lumber.

Yandle, D. O.  
29090 SOUTHERN YELLOW PINE TREE OVERRUNS AND LUMBER WIDTH DISTRIBUTIONS. U. S. Forest Serv. Res. Paper SE-41, 12 p. Sept. 1968. A99.9 F7623U

This paper presents tree overruns and the distribution of rough-green lumber, by lumber grades and board widths, from trees graded by the Forest Service standard tree grades for southern pine. The data were collected from southwide lumber recovery studies that utilized loblolly, shortleaf, pond, longleaf, and slash pine trees that were manufactured into standard yard and structural lumber.

GLUING FIRE-RETARDANT-TREATED  
DOUGLAS-FIR AND WESTERN HEMLOCK. U. S. Forest  
Serv. Res. Note FPL-0160,13 p. Ref. Nov. 1968.  
A99.9 F7634Un
- Ammonium sulfate, zinc chloride, boric acid, and sodium dichromate—components of the American Wood-Preservers' Association Type D fire retardant—were found to affect the rate of gelation of a resorcinol-resin adhesive. Boric acid retarded the rate of gelation, whereas the other components of the fire-retardant mixture increased the rate of gelation.
- In block-shear evaluations, the specimens made with resorcinol-resin glues from joints of either treated Douglas-fir or western hemlock yielded lower quality joints than did similar untreated specimens.
- 29094 Schaffer, E. L.  
A SIMPLIFIED TEST FOR ADHESIVE BE-  
HAVIOR IN WOOD SECTIONS EXPOSED TO FIRE. U. S.  
Forest Serv. Res. Note FPL-0175,12 p. Nov. 1968.  
A99.9 F7634Un
- A relatively simple test procedure was developed to evaluate the behavior of various adhesives near fire-exposed surfaces in laminated constructions. A number of sections cut from laminated blocks were exposed to fire on one surface. After this exposure, the sections were transversely cut, and the gluelines were examined for separation depth. In addition, the cool specimens were broken along the glue joints so as to be able to determine the residual bonded area. An equation incorporating both the separation depth and the residual bonded area on the joints was utilized to obtain a "degradation index" on which adhesive behavior near fire-exposed surfaces can be quantitatively based. This index was used to make a preliminary grouping of the behavior under fire of six types of adhesives in laminated sections of Douglas-fir and southern pine.

METHOD FOR EVALUATING SHEAR PROP-  
ERTIES OF WOOD. U. S. Forest Serv. Res. Note  
FPL-0195,8 p. June 1968. A99.9 F7634Un
- Wisconsin University, cooperating.
- A test procedure is described for determining the shear properties of wood where the shear stress is in radial or tangential planes. If the shear force is across the grain, it is often termed "rolling" because of the tendency for the shearing forces to roll the wood fibers. The Specimen is not difficult to fabricate, and test gives a state of almost pure shear. Values for rolling shear properties for the pieces tested were 10 to 20 percent of the values for the same properties from tests with a longitudinal shear force in the longitudinal-tangential plane. Components of variance associated with the tests of closely matched specimens are given.
- Rolling shear properties are particularly important for selected plywood applications, such as for box beams or for gusset plates. Successful design requires a better understanding and appreciation of the nature of rolling shear.

EFFECT OF RESTRAINED SWELLING ON  
WOOD MOISTURE CONTENT. U. S. Forest Serv. Res.  
Note FPL-0196,3 p. July 1968. A99.9 F7634Un
- Tests with Quercus.
- Swelling stresses are responsible for many of the defects that occur in wood and wood products during the drying process and in end-use situations. A rational approach to reducing these defects depends on a knowledge of the swelling stresses and the factors that affect them. Maximum swelling pressure and the time required to reach the maximum swelling pressure are shown dependent on the size of the sorption increment, on the temperature, and on the direction of restraint. It is shown that the equilibrium moisture content of wood restrained from swelling is lower than that of wood unrestrained from swelling. With a knowledge of the swelling stresses and the mechanical properties of the wood and wood products involved it may be possible to design more effective drying processes and to secure better performance for end products.

TWO TESTS OF WHITE PINE [PINUS MONTI-  
COLA], TRUE FIR [ABIES], AND DOUGLAS-FIR [PSEU-  
DOTSUGA MENZIESII] SEEDSPOTTING IN THE CAS-  
CADE RANGE. U. S. Forest Serv. Res. Note PNW-80,  
11 p. May 1968. A99.9 F7625U
- Satisfactory stocking was obtained on seed-spots protected by wire screens but generally not on unscreened spots despite extensive baiting of study areas. Western white pine was most successful species used and true firs were least successful. Damping-off, rodents, and insects were responsible for most seedling mortality.
- 29102 Beckwith, R. C.  
THE LARGE ASPEN TORTRIX, CHORISTONE-  
URA CONFLICTANA (WLKR.), IN INTERIOR ALASKA.  
U. S. Forest Serv. Res. Note PNW-81,10 p.,map. July  
1968. A99.9 F7625U
- The large aspen tortrix caused extensive defoliation in interior Alaska during 1966 and 1967. Studies showed its life history to be similar to that reported from Canada. Overwintering larvae became active in early May and completed their development by early July. Natural mortality is discussed with emphasis on the effect of larval starvation on survival and egg production.

CAN THINNING SLASH CAUSE A NITROGEN  
DEFICIENCY IN PUMICE SOILS OF CENTRAL OREGON?  
U. S. Forest Serv. Res. Note PNW-82,11 p. July 1968.  
A99.9 F7625U
- Pinus contorta and P. ponderosa.
- Decomposition of thinning slash deposited on the soil surface should have no direct adverse effect on the soil nitrogen available to higher plants in the pumice soil region. Decomposition of roots of cut trees would immobilize nitrogen in the soil immediately adjacent to the root during the decomposition period, which appears to be short for the smaller roots. However, these dead roots no longer compete for soil nitrogen in unexploited soil zones. Thus, nitrogen available for individual trees may be increased by thinning. If chipped slash is mechanically incorporated into the soil, a temporary nitrogen deficiency is likely, particularly in nonpumice soils. This deficiency can be prevented by fertilization.

29104 Crouch, G. L.  
SPRING-SEASON DEER BROWSING OF DOUGLAS-FIR ON THE CAPITOL FOREST IN WESTERN WASHINGTON. U. S. Forest Serv. Res. Note PNW-84, 8 p. Aug. 1968. A99.9 F7625U

Deer started browsing Douglas-fir shortly after bud burst began and continued browsing for about 1 month. Douglas-fir was eaten despite abundant new growth on many plant species that deer prefer in late spring and early summer. The beginning and ending of tree browsing did not seem to be related to any visual growth-stage characteristic except bud burst. Leaders were growing rapidly when browsing began and ended. Availability of other vegetation in similar stages of development also appeared unrelated to Douglas-fir browsing.

29105 Binkley, V. W., and Carson, W. W.  
AN OPERATIONAL TEST OF A NATURAL-SHAPED LOGGING BALLOON. U. S. Forest Serv. Res. Note PNW-87, 8 p., map. Sept. 1968. A99.9 F7625U

A three-month test was performed to evaluate a natural-shaped balloon under logging conditions, near Reedsport, Oregon. Data were collected on the balloon's availability, maintenance records, handling requirements, and yarding performance. The balloon was found to be stable and operable in winds up to 25 m.p.h. and capable of surviving storms when properly bedded down.

29106 Nelson, E. E.  
SURVIVAL OF *PORIA WEIRII* IN CONIFER, ALDER [ALNUS], AND MIXED CONIFER-ALDER STANDS. U. S. Forest Serv. Res. Note PNW-83, 5 p. July 1968. A99.9 F7625U

Cubes of Douglas-fir heartwood naturally infected with *Poria weirii* were buried for up to 18 months in soil beneath stands of conifers, alder, and mixed alder and conifers. Survival of the fungus under the pure conifer stand was better than under either of the alder-containing stands. It is proposed that lower survival in alder soils is due to high levels of nitrate nitrogen. Many fungi, bacteria, and Actinomycetes competing with *P. weirii* for soil nutrients are able to use this form of nitrogen while *P. weirii* cannot. This difference in physiologies could be a major reason for higher mortality of *P. weirii* in alder soils.

PUBLIC RESPONSIBILITY FOR NATURAL RESOURCES: ATTITUDES OF UTAH COUNTY, UTAH RESIDENTS. U. S. Forest Serv. Res. Note PSW-165, 8 p. 1968. A99.9 F7652

Attitudes of responsibility for natural resources were related to certain population characteristics. Social class was not a significant determinant, but age, marital status, length and location of residence, and awareness of forest problems were related to concern for negligence and vandalism. Sex, personal experience with forest fire fighting, attitude toward agency, frequency of use, and awareness of forest problems were related to action response.

29108 Skolmen, R. G.  
NATURAL DURABILITY OF SOME WOODS USED IN HAWAII: PRELIMINARY FINDINGS. U. S. Forest Serv. Res. Note PSW-167, 7 p. 1968. A99.9 F7652

WHITE FIR [*ABIES CONCOLOR*] STANDS KILLED BY TUSSOCK MOTH [*HEMEROCAMPA PSEUDOSUGATA*]: 70-MM. COLOR PHOTOGRAPHY AIDS DETECTION. U. S. Forest Serv. Res. Note PSW-168, 5 p. 1968. A99.9 F7652

The use of large-scale 70-mm. aerial photography proved to be an effective technique for detecting trees in white fir stands killed by Douglas-fir tussock moth in northeastern California. Correlations between ground and photo estimates of dead trees were high. But correlations between such estimates of lesser degrees of tree damage—thin tops and topkill—were much lower; increased training of interpreters could improve these correlations.

29110 Folkman, W. S.  
FOLLOW-UP EVALUATION OF FIRE HAZARD INSPECTION PROCEDURES, BUTTE COUNTY, CALIFORNIA. U. S. Forest Serv. Res. Note PSW-169, 5 p. 1968. A99.9 F7652

A study made in 1966 in Butte County, Calif., to assess the effectiveness of fire hazard inspection procedures was repeated in 1967. Purpose of the inspections is to secure compliance with fire safety requirements. The observed drop in number of violations suggests a carryover effect in 1967 from the first study. In many cases, personal contact was still necessary to secure conformance—despite exposure to the program in 1966; in some cases, more than one contact proved to be necessary.

29111 Krugman, S. L., and Littlefield, J. F.  
A USEFUL SINGLE-SOLUTION POLYCHROME STAIN FOR PLANT MATERIAL; BROOK CYTE-CHROME. U. S. Forest Serv. Res. Note PSW-170, 4 p. 1968. A99.9 F7652

Chiefly trees and fungi.  
Fresh and chemically fixed sectioned plant material can be quickly stained by applying a Brook Cyte-Chrome I polychrome stain. Staining time averaged only about 10 minutes. And exact timing of staining and destaining is not as critical as with most of the commonly used stains. The over-all quality is comparable to that of the traditional stains.

29112 Gordon, D. T.  
TREE SHADOW PATTERNS AND ILLUMINATION MEASUREMENTS, WITHIN CLEARCUT STRIPS AND IRREGULAR OPENINGS IN A TRUE FIR FOREST. U. S. Forest Serv. Res. Note PSW-172, 9 p. 1968. A99.9 F7652

Daily progression of shadows cast by red and white fir trees in forest stand openings is illustrated by vertical aerial photographs made on the summer solstice at 2-hour intervals from 7 a.m. to 5 p.m. The aerial photos show shade patterns in three irregularly-shaped, natural stand openings and two different widths (3-chains and 5-chains) of clearcut strips. Illumination measurements are reported to aid interpretation of shadow patterns.

29113 Lyon, R. L., Page, M., and Brown, S. J.  
TOLERANCE OF SPRUCE BUDWORM [*CHORISTONEURA OCCIDENTALIS*] TO MALATHION: MONTANA, NEW MEXICO POPULATIONS SHOW NO DIFFERENCES. U. S. Forest Serv. Res. Note PSW-173, 6 p. Ref. 1968. A99.9 F7652

In pest control operations by the U.S. Forest Service using malathion sprays, nearly twice as many spruce budworms were killed in Montana as in New Mexico. To find out if budworms in New Mexico had greater tolerance to the insecticide, malathion was applied by topical and aerosol treatments in the laboratory to 6th-instar populations from the two States. No differences in susceptibility of the insects to malathion were found.

29114 Aldon, E. F., and Garcia, G.  
SUMMER DEFERRED SEMIDESERT RANGES. U. S. Forest Serv. Res. Note RM-95, 3 p. 1967. A99.9 F7632Us

Sporobolus airoides grazed by beef cattle.  
Research in west-central New Mexico showed alkali saccaton on flood plains offers management its best change for increasing productivity of semidesert lands. It is highly palatable, and can produce much herbage on a relatively small area. Under summer-deferred grazing, production of alkali saccaton has been gradually increasing in spite of variable precipitation.

29115 Pase, C. E., and Thilenius, J. F.  
COMPOSITION, PRODUCTION, AND SITE FACTORS OF SOME GRASSLANDS IN THE BLACK HILLS OF SOUTH DAKOTA. U. S. Forest Serv. Res. Note RM-103, 7 p. Ref. 1968. A99.9 F7632Us

Two major grassland types were found, bluegrass and mixed prairie. On the prairie type, total herbage and grass production were greater on ungrazed than on grazed range; little difference was apparent on the bluegrass type. Moisture regime appears to be an important single factor in determining which type occurs on a given site—more moist sites are dominated by bluegrasses; the drier sites by prairie vegetation.

29116 Kennedy, P. C.  
INSECTS AND DISEASES OF SIBERIAN PEA SHRUB [*CARAGANA [ARBORESCENS]*] IN NORTH DAKOTA, AND THEIR CONTROL. U. S. Forest Serv. Res. Note RM-104, 4 p. 1968. A99.9 F7632Us

Grasshoppers do most damage. Malathion is recommended to control most insects; Bordeaux mixture for Septoria leaf spot.

WOODPECKER FEEDING ON ENGELMANN  
SPRUCE BEETLE IN WINDTHROWN TREES. U. S. For-  
est Serv. Res. Note RM-105,4 p. 1968. A99.9 F7632Us  
Northern three-toed and hairy woodpeckers fed  
at windthrown Engelmann spruce trees infested with  
*Dendroctonus obscurus* (Mann.). Sections of the infested  
boles were covered with screen to prevent woodpecker  
feeding over the winter and following summer. Estimates  
at the end of that time showed that woodpeckers caused  
a relative mortality of 70 to 79 percent of the brood.  
Predation on the Engelmann spruce beetle in windthrown  
trees appears to be important in declining infestations.

PONDEROSA PINE [PINUS PONDEROSA]  
DWARF MISTLETOE [ARCEUTHOBium VAGINATUM  
CRYPTOPODUM] IN RELATION TO TOPOGRAPHY AND  
SOILS ON THE MANITOU EXPERIMENTAL FOREST,  
COLORADO. U. S. Forest Serv. Res. Note RM-107,4 p.  
1968. A99.9 F7632Us  
The marked variations in frequency of dwarf  
mistletoe found on three soil types studied (granitic,  
limestone, and arkose) apparently were related to varia-  
tion in slope steepness, with frequency highest on areas  
with gentle slopes. Stands on soils with a high proportion  
of gentle slopes (for example, arkose) had the most dwarf  
mistletoe; those on predominately steep slopes (for exam-  
ple, granite) had much less infection.

SPECIES INTERACTIONS OF GROWTH IN-  
HIBITORS IN NATIVE PLANTS OF NORTHERN ARIZO-  
NA. U. S. Forest Serv. Res. Note RM-113,2 p. 1968.  
A99.9 F7632Us  
Extracts of most plants contain materials that  
inhibit the growth of seedlings, but the effect of inhibitors  
from different species varies with the test seedlings used.  
These interactions demonstrated in the laboratory may  
also be important in interspecific relationships in the  
field.

A TRANSMITTER FOR TRACKING WILDLIFE.  
U. S. Forest Serv. Res. Note RM-114,4 p. 1968.  
A99.9 F7632Us  
R. T. Dickie, E. L. Boeker, and V. E. Scott,  
joint authors.  
Schematics are presented for a transmitter  
with an amplifier stage to increase receiving distance.  
Weight of the transmitter with one battery is 2 ounces,  
maximum battery life is 45 days, and maximum receiving  
distance is 2-1/2 miles.

A FIRE PRESCRIPTION FOR CONSUMING  
PONDEROSA PINE DUFF. U. S. Forest Serv. Res. Note  
RM-115,4 p. 1968. A99.9 F7632Us  
A "hot" prescribed fire was set in October  
1964 to burn a specific quantity of litter in ponderosa  
pine. This objective was accomplished; other effects,  
which may be beneficial under some circumstances, in-  
cluded thinning of the overstory from below, increased  
seedling germination, and temporary reduction of fire  
hazard. Forage and browse were not benefited.

SIZE OF ASPEN [POPULUS TREMULOIDES]  
CROP TREES LITTLE AFFECTED BY INITIAL SUCKER  
DENSITY. U. S. Forest Serv. Res. Note NC-51,4 p.  
1968. asD11.A33  
Size of aspen crop trees at age 15 years is  
essentially the same for a wide range of initial sucker  
densities. High densities are not necessary to produce  
adequately stocked stands.
- 29127 Phelps, W. R., and Weber, R.  
ANTIBIOTICS DO NOT CONTROL BLISTER  
RUST IN EASTERN WHITE PINE [PINUS STROBUS]  
SEEDLINGS. U. S. Forest Serv. Res. Note NC-52,3 p.  
1968. asD11.A33  
Caused by Cronartium ribicola.  
To prevent blister rust infections in Eastern  
white pine seedlings, the antibiotics, cycloheximide  
(Acti-dione) and Phytoactin, were tested in root dips,  
root slurries, and foliar drenches before planting and  
after planting the trees. None of the methods and materi-  
als tested was effective.

THE IMPACT OF INSECTS ON SECOND-YEAR  
CONE CROPS IN RED PINE [PINUS RESINOSA] SEED-  
PRODUCTION AREAS. U. S. Forest Serv. Res. Note NC-  
53,2 p. 1968. asD11.A33  
Second-year cone crops in red pine seed-pro-  
duction areas have been severely damaged by five species  
of insects. Control of the two most destructive pests  
could increase present seed yields in most areas by at  
least 50 percent. Some seed-production areas may not  
produce harvestable seed crops until cone-insect popula-  
tions are suppressed.

BARK SEPARATION DURING CHIPPING WITH  
A PARALLEL KNIFE CHIPPER. U. S. Forest Serv. Res.  
Note NC-54,3 p. 1968. asD11.A33  
Five winter-cut northern species were chipped  
in a frozen and unfrozen condition with a parallel knife  
chipper. The degree of bark separation during chipping  
and a relative gradation of chip size are reported.
- 29130 Fobes, E. W., and Rowe, R. W.  
MARKETING PRACTICES OF NORTHERN  
MINNESOTA SAWMILLS. U. S. Forest Serv. Res. Note  
NC-55,3 p. map. 1968. asD11.A33  
Most of the lumber produced in northern Min-  
nesota is marketed in Minnesota, and the marketing area  
increases as mill size increases. Aspen is a dominant  
species. About 45 percent of the lumber is graded; con-  
centration and grading would improve marketing. Less  
than one-third of the by-products are marketed.
- 29131 Jennings, D. T.  
USING BLACK LIGHT TO FIND JACK-PINE  
BUDWORM [CHORISTONEURA PINUS] EGG MASSES.  
U. S. Forest Serv. Res. Note NC-56,3 p. 1968.  
asD11.A33  
Jack pine foliage infested with jack-pine bud-  
worm egg masses was examined under two kinds of light—  
black light and a combination of natural and fluorescent  
light. Black light significantly increased the accuracy of  
count but not the efficiency of examination.

TIMBER VOLUME IN INDIANA, 1967. U. S. Forest Serv. Res. Note NC-58,4 p.,map. 1968. asD11.A33  
The recently completed Second Forest Survey of Indiana shows that the State's timber volume has increased by one-fourth in the 17 years since the previous survey. Timber volume by county is presented.
- 29133 Essex, B. L.  
FOREST LAND IN INDIANA COUNTIES, 1967. U. S. Forest Serv. Res. Note NC-57,4 p.,map. 1968. asD11.A33  
Commercial forest land has declined slightly from 4.1 million acres in 1950 to 3.9 million acres in 1967. The more heavily forested counties are in the southern half of the State where forest land has been increasing.
- 29134 Blyth, J. E.  
LAKE STATES PULPWOOD PRODUCTION DROPS SEVEN PERCENT, 1967. U. S. Forest Serv. Res. Note NC-59,3 p. 1968. asD11.A33  
This twenty-second annual report shows the Lake States pulpwood harvest decreased to about 4 million cords from a record high of 41/4 million cords in 1966. Pulpwood receipts remained high in Wisconsin but decreased in Michigan and Minnesota. Minnesota shipped 106,000 cords more to Wisconsin than in 1966. As a result, only Minnesota's 1967 pulpwood production was higher than the previous year.

AMENDMENT TO "GUIDE TO HARDWOOD LOG GRADING," REVISED 1965. U. S. Forest Serv. Res. Note NE-81,2 p. 1968. A99.9 F7622U  
Amendment to "A guide to hardwood log gradings," a teaching aid and field reference first published in 1963 and revised in 1965. Amends only the section on epicormic or adventitious bud clusters.
- 29138 Little, S., and Somes, H. A.  
HERBICIDE TREATMENTS OF JAPANESE HONEYSUCKLE FOR RELEASING DESIRABLE REPRODUCTION OR FOR SITE PREPARATION. U. S. Forest Serv. Res. Note NE-83,8 p. 1968. A99.9 F7622U  
Various herbicides were used to release pine or hardwood seedlings from competition of Japanese honeysuckle, or to eliminate honeysuckle in areas being prepared for regeneration. Considering both the degree of honeysuckle control and the amount of damage to desired trees, we recommend 2,4-D emulsifiable acid with application in late fall for release of hardwoods and in late summer or early fall for release of pines. A mixture of 2,4-D-picolinic acid applied during spring or early summer is recommended as a conditioning treatment to prepare an area for new regeneration.

SAPSUCKERS [SPHYRAPICUS VARIUS] AND FOMES IGNIARIUS VAR. POPULINUS. U. S. Forest Serv. Res. Note NE-84,2 p. 1968. A99.9 F7622U  
In aspen trees infected by *Fomes igniarius* var. *populinus*, the thin shell of sound wood enclosing the central column of decayed wood offers an ideal place for sap-suckers to peck out nests.
- 29140 Leak, W. B.  
BIRCH REGENERATION; A STOCHASTIC MODEL. U. S. Forest Serv. Res. Note NE-85,7 p. 1968. A99.9 F7622U  
The regeneration of a clearcutting with paper or yellow birch is expressed as an elementary stochastic (probabilistic) model that is computationally similar to an absorbing Markov chain. In the general case, the model contains 29 states beginning with the development of a flower (ament) and terminating with the abortion of a flower or seed, or the development of an acceptable stem, unacceptable stem, dead seedling, or nongerminate (the six absorbing states). Expressions are given for the expected mean number of occurrences of each state, and the probability of arriving at any absorbing state after

MINIATURE SOIL AUGER FOR POT SAMPLING. U. S. Forest Serv. Res. Note SE-88,2 p. Feb. 1968. A99.9 F7623Un  
A carpenter's ship auger makes an efficient tool for sampling the soil in pots. The auger minimizes the size of sampling holes and is unhampered by large soil particles.
- 29143 Olson, D. F.  
EARLY SURVIVAL AND GROWTH OF PLANTED NORTHERN RED OAK IN THE SOUTHERN APPALACHIANS. U. S. Forest Serv. Res. Note SE-89,3 p. Mar. 1968. A99.9 F7623Un  
This paper presents 2-year survival and growth data for six northern red oak plantings, each containing three morphological seedling grades, over a range of site indexes from 76 to 98 feet at age 50.  
Seedling survival averaged 94 percent, with no important differences due to seedling grade or site index. Height growth has averaged only 3 inches a year. There has been no significant growth difference between grades, but seedlings on site 76 land grew less than those on the five sites with higher site index.

PULPWOOD PRODUCTION IN THE NORTH-EAST, 1966. U. S. Forest Serv. Resour. Bull. NE-11, 33 p., map. 1968. A99.9 F7622Uf  
A report on the fourth annual canvass of pulpwood production in the 14 Northeastern States, containing data on round pulpwood, pulpwood chips, and wood-industry residue production; and on receipts in region, by state. Round pulpwood production is reported by states, counties, and species groups; pulpwood chips and residues are reported by states for softwoods and hardwoods. Comparisons are made with the previous year's production and the trend in pulpwood production in the Northeast for the past 4 years is shown graphically.

FOREST STATISTICS FOR THE NORTHERN COASTAL PLAIN OF SOUTH CAROLINA, 1968. U. S. Forest Serv. Resour. Bull. SE-10, 34 p. May 1968.  
A99.9 F7623UB  
The diversion of commercial forest land to other land uses has just about offset the addition of new forest land in the Northern Coastal Plain of South Carolina since 1958. Commercial forests still occupy about 4.7 million acres, or 63 percent of the total land area. Volumes of softwood and hardwood timber have increased by about 24 and 13 percent, respectively, reversing downward trends in volume between 1947 and 1958. In 1967, growth exceeded removals by 51 percent with over half of the excess growth in pine.

# STATE AGRICULTURAL EXPERIMENT STATION PUBLICATIONS

Publications issued by the State Agricultural Experiment Station are usually available from the issuing experiment station, except where noted, and as long as the supply lasts. The National Agricultural Library does not distribute them.

Reproductions of material not available from the various State institutions may be ordered at regular library rates from the United States Department of Agriculture, National Agricultural Library, Photoduplication Section, Beltsville, Md., 20705.

## Arkansas Agricultural Experiment Station, Fayetteville

29194 Halbrook, W. A., Ray, M. L., and Spooner, A. E.  
FEED COSTS AND RETURNS FROM BEEF CALVES PRODUCED UNDER TWO DIFFERENT FORAGE REGIMES. Ark. Agr. Exp. Sta. Bull. 735, 28 p. Nov. 1968. 100 Ar42

29195 Talbert, R. E., Frans, R. E., and Orr, J. E.  
FIELD SCREENING OF NEW CHEMICALS FOR HERBICIDAL ACTIVITY. 1968. Ark. Agr. Exp. Sta. Mimeogr. Ser. 169, 17 p. Sept. 1968. 100 Ar42M

29196 Dale, J. L., and York, J. O.  
MAIZE DWARF MOSAIC VIRUS RATINGS OF CORN HYBRIDS AND INBREDS TESTED IN ARKANSAS IN 1968. Ark. Agr. Exp. Sta. Mimeogr. Ser. 170, 5 p. Nov. 1968. 100 Ar42M

## Florida Agricultural Experiment Station, Gainesville

29197 Hodges, E. M., and others.  
EFFECT OF PHOSPHATE FERTILIZERS ON PANGOLGRASS PASTURES AND BEEF PRODUCTION. Fla. Agr. Exp. Sta. Circ. S-190, 11 p. Aug. 1968. 100 F66C1

W. G. Kirk, G. K. Davis, R. L. Shirley, F. M. Peacock, J. F. Easley, H. L. Breland, and F. G. Martin, joint authors.

Nutritive value and yield of Digitaria decumbens.

29198 Chapman, H. L., and Kirk, W. G.  
MANAGEMENT GUIDE FOR A COW-CALF PROGRAM IN CENTRAL AND SOUTH FLORIDA. Fla. Agr. Exp. Sta. Circ. S-192, 6 p. Nov. 1968. 100 F66C1  
Includes pasture management for beef cattle.

29199 Chapman, H. L., and Kirk, W. G.  
RECOMMENDED PRACTICES FOR FATTENING STEERS FOR HOME USE IN CENTRAL AND SOUTH FLORIDA. Fla. Agr. Exp. Sta. Circ. S-193, 7 p. Dec. 1968. 100 F66C1

29200 Leighty, R. G., Carlisle, V. W., and Smith, F. B.

SOIL ASSOCIATION MAP OF GULF COUNTY, FLORIDA. Fla. Agr. Exp. Sta. Circ. S-194, 12 p.-folder., map. July 1968. 100 F66C1

U. S. D. A., cooperating.  
29201 Mortensen, J. A.  
STOVER, AN EARLY BUNCH GRAPE FOR CENTRAL FLORIDA. Fla. Agr. Exp. Sta. Circ. S-195, 6 p. Dec. 1968. 100 F66C1

29202 Thompson, N. P.  
REDUCTION OF PARATHION RESIDUE ON CELERY. Sunshine State Agr. Res. Rep. [Fla. Sta.] 13 (5/6):3-4. Sept./Nov. 1968. 100 F66Su

29203 Saxena, G. K., and Locascio, S. J.  
STRAWBERRY FERTILIZATION AND QUALITY OF FRESH FRUIT. Sunshine State Agr. Res. Rep. [Fla. Sta.] 13 (5/6):4-5. Sept./Nov. 1968. 100 F66Su

29204 Williams, M.  
TWO STATES COOPERATE; PEACHES BRED FOR NEMATODE RESISTANCE. Sunshine State Agr. Res. Rep. [Fla. Sta.] 13 (5/6):7-8. Sept./Nov. 1968. 100 F66Su

California and Florida.

29205 Jones, J. P., and Woltz, S. S.  
CONTROL OF RACE 2 FUSARIUM [OXYSPO-RUM LYCOPERSICI] OF TOMATOES. Sunshine State Agr. Res. Rep. [Fla. Sta.] 13 (5/6):8-9. Sept./Nov. 1968. 100 F66Su

29206 Woods, C.  
"FREEZE BRAND" SUPERIOR TO HOT IRON METHOD. Sunshine State Agr. Res. Rep. [Fla. Sta.] 13 (5/6):10-11. Sept./Nov. 1968. 100 F66Su  
Cattle.

29207 Shoemeyen, J.  
DRAINAGE TECHNIQUES STILL AN ISSUE IN FLATWOODS CITRUS. Sunshine State Agr. Res. Rep. [Fla. Sta.] 13 (5/6):12-13. Sept./Nov. 1968. 100 F66Su

29208 Joiner, J. N., and Smith, H. H.  
HIGHWAY DESIGN STRESSES BEAUTY AND SAFETY. Sunshine State Agr. Res. Rep. [Fla. Sta.] 13 (5/6):14-15. Sept./Nov. 1968. 100 F66Su

## Georgia Agricultural Experiment Stations, Athens

29209 Morey, D. D.  
PROGRESS REPORT ON SMALL GRAIN RESEARCH IN SOUTH GEORGIA. Ga. Agr. Exp. Sta. Res. Rep. 28, 26 p. June 1968. S51.E22

Walker, M. E., and others.

29210 BROADCAST VERSUS DRILL APPLICATION OF FERTILIZER FOR COTTON IN THE COASTAL PLAIN OF GEORGIA. Ga. Agr. Exp. Sta. Res. Rep. 29, 18 p. June 1968. S51.E22  
O. L. Brooks, R. B. Moss, and S. A. Parham, joint authors.

29211 Haynes, B. C., and Simons, J. W.  
SURFACE BONDING AND WATERPROOFING CEMENT COATING FOR CONCRETE BLOCK WALLS. Ga. Agr. Exp. Sta. Res. Rep. 30, 7 p. June 1968. S51.E22

U. S. D. A.; and Georgia University, College of Agriculture, cooperating.

29212 Neathery, M. W.  
INFLUENCE OF SELF FEEDING VS. ONCE-DAILY, AND TWICE-DAILY FEEDING, ON THE PERFORMANCE OF GROWING AND FATTENING LAMBS. Ga. Agr. Exp. Sta. Res. Rep. 31, 14 p. Ref. Sept. 1968. S51.E22

29213 Fry, B. O.  
COWART, A NEW SELF-FERTILE MUSCADINE. Ga. Agr. Exp. Sta. Res. Rep. 32, 6 p. Sept. 1968. S51.E22

## Hawaii Agricultural Experiment Station, Honolulu

29214 Hamilton, R. A., and Ito, P.  
SUNRISE SOLO, A DIFFERENT COLORED SOLO PAPAYA. Hawaii Agr. Exp. Sta. Circ. 69, 5 p. Aug. 1968. 100 H313

## Idaho Agricultural Experiment Station, Moscow

29215 Sunderman, D. W., Wise, M., and McKay, H. C.  
MORAN, A RUST-RESISTANT, HIGH-QUALITY HARD RED SPRING WHEAT FOR EASTERN IDAHO. Idaho Agr. Exp. Sta. Bull. 498, 4 p. June 1968. 100 Id14

## Iowa Agricultural and Home Economics Experiment Station, Ames

29216 Lassahn, P. L.  
GRUBS EAT INTO CATTLE PROFITS. Iowa Farm Sci. 23(3):8-10, map. Sept. 1968. 275.28 I94  
Beef cattle losses.

## Louisiana Agricultural Experiment Station, University Station, Baton Rouge

29217 Tyner, F. H., and Wiegmann, F. H.  
FEWER FARMERS BUT MORE PROBLEMS. La. Agr. 12(1):3, 16. Fall 1968. 100 L939  
Management difficulties.

29218 Newman, B. E., and Brupbacher, R. H.  
SOURCES OF NITROGEN IN FERTILIZERS FOR COTTON. La. Agr. 12(1):6-7. Fall 1968. 100 L939  
Reduce side effect of increased soil hydrogen concentration.

Schuler, C. A., and McDermid, R. W.  
29219 USES, USERS SURVEYED; PONTAINEBLEAU, LOUISIANA'S MOST POPULAR STATE PARK. La. Agr. 12(1):8-9, 11. Fall 1968. 100 L939

## ENTOMOLOGY

Contains references chiefly on general entomology, and taxonomic and geographic entomology. Some references on pests of crops and products are included in the Bibliography, but for more detailed coverage of the literature on pests and their control, consult the Pesticides Documentation Bulletin, a biweekly publication of the National Agricultural Library.
